

Iris Prosthetic System (IPS®)

Unlimited Solutions

The patented Iris Prosthetic System (IPS®) concept consists of different combinable elements which are available in various colours. The IPS® elements restore the iris diaphragm and can be used in conjunction with a posterior chamber IOL and a Capsular Tension Ring.

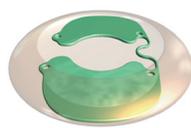

Main features and benefits

- ✓ Correction of partial or total iris defects
- ✓ Unlimited combinations using basic elements
- ✓ Optimal control of postoperative artificial pupil diameter

Examples of possible combinations of IPS® elements in the capsular bag:

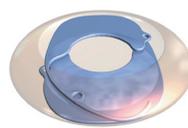

Single Element

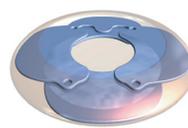

Double Element

Double Element + Single Element

Single Element + Single Element

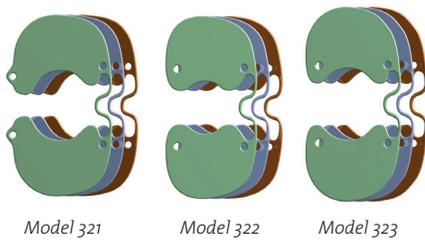

Double Element + Double Element

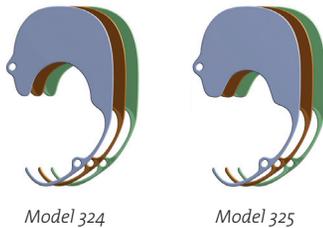

IPS® in combination with an IOL and a Capsular Tension Ring

IPS® Double Element Models 321, 322, 323

Model 321:	Overall Ø: 10.5 mm Pupil Aperture: 4.0 mm
Model 322:	Overall Ø: 10.5 mm Pupil Aperture: 3.0 mm
Model 323:	Overall Ø: 11.0 mm Pupil Aperture: 4.0 mm
Colours:	Brown, green, blue

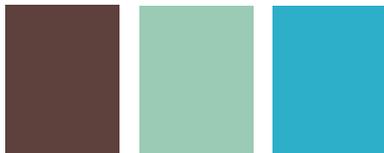

IPS® Single Element Models 324, 325

Model 324:	Overall Ø: 10.5 mm Pupil Aperture: 4.0 mm
Model 325:	Overall Ø: 10.5 mm Pupil Aperture: 3.0 mm
Colours:	Brown, green, blue

Colours

Ophtec's Iris Reconstruction Implants are available in brown, green and blue. These colours have been carefully chosen to simulate the natural colouring of most eyes. Also available in black as patient design devices.

Colour specifications of the Iris Reconstruction Implants

Warning: 1. The Anterior Segment Reconstruction Prostheses are only available in 3 standard colours and therefore OPHTEC cannot guarantee the perfect colour match with the fellow eye; 2. After implantation in the eye the colour of the prosthesis might look lighter; 3. For a better evaluation and choice of the colour match, we suggest you to consult OPHTEC representatives; 4. Black Polycarbonate is more fragile than other (PMMA) colours.
